

Banking Portfolio Analytics

SQL + Power BI Data Analytics Demo Report

Prepared for: Prospective Client / Freelance Engagement

Prepared by: Radion X | Data Analytics & BI Services

Document Type: Sample / Demo Report

DEMO PREVIEW EDITION

Mission

This project delivers an end-to-end analytics solution for a retail banking portfolio, combining structured SQL analysis with an interactive Power BI dashboard. The objective is to transform raw operational data into clear, actionable insight for branch, risk, and customer-service decision-making.

Datasets Analyzed

Dataset	Records Cover	Key Fields
Customers	Demographics & profile	Age, Income, Credit Score, Segment
Accounts	Balances & status	Balance, Account Type, Status
Loans	Repayment health	EMI, Outstanding, Days Past Due
Credit Cards	Utilization & billing	Credit Limit, Utilization %
Transactions	Spend behavior	Merchant, Amount, Channel
Complaints	Service quality	Type, Priority, Resolution Days
Fraud Flags	Risk monitoring	Risk Score, Investigation Status

Tools & Approach

- MySQL**
Schema design, data ingestion via LOAD DATA INFILE, and analytical querying across 9 linked tables.
- Power BI**
Interactive dashboard with slicers, KPI cards, and drill-down visuals built on the SQL query outputs.

Key Insights - SQL Analysis

Selected Findings from Query-Level Analysis

68%

Active Accounts

54.2%

Avg. Credit Utilization

312

Loans DPD > 30

4.6 days

Avg. Complaint Resolution

Findings Summary

Customer Base

Balanced gender distribution with concentrated demand from Uttar Pradesh, West Bengal, and Gujarat, indicating priority states for regional engagement.

Account Health

Majority of accounts remain Active; a measurable Dormant segment is a clear reactivation opportunity for the retention team.

Loan Risk

A defined set of loans exceed 30 Days Past Due - flagged and ranked for early collections follow-up.

Credit Utilization

Utilization percentage per card highlights customers approaching their credit limit, useful for proactive risk alerts.

Service Quality

Average resolution time varies notably by complaint type, pointing to specific process bottlenecks worth addressing.

Dashboard Sections

Customer Overview

Gender split, state-wise map, segment and status breakdown.

Branch Performance

Branch-wise deposits, customer count, and average balance.

Loan Risk Monitor

Days-Past-Due tracking and outstanding principal by loan type.

Credit Utilization

Utilization % ranking, limit vs. available limit comparison.

Complaints & Fraud

Resolution time by type/channel and fraud risk-score monitoring.

Why This Matters

The combination of SQL-driven analysis and Power BI visualization gives decision-makers both the depth of raw data querying and the clarity of an interactive, filterable dashboard - reducing time-to-insight for branch managers, risk teams, and leadership.

Thank You

This concludes the demo preview of the report.

Full Report Scope

This document is a condensed demo/preview.
The complete, client-ready report - covering every dataset, query, and dashboard page in full detail - will run to 50+ pages, tailored exactly to your project requirements.

50+ PAGES • AS PER REQUIREMENT

Let's build your full custom analytics report.
